SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT
Under 37 CFR §§ 1.56 and 1.97-98

SIR:

Pursuant to the provisions of 37 CFR §§ 1.56 and 1.97-98, enclosed herewith is modified form PTO/SB/08A listing references for consideration by the Examiner. A concise explanation in accordance with 37 CFR §1.98(a)(3) of the relevant portions of the cited references that are not in the English language are believed to be set forth in each of the English abstracts, and as follows:

Reference C2 (PTO-1449), "Net Design As You Want It," Nikkei Communication, 1999, Vol. 294, pp. 103-106:

On April 1, NTT-ME, a subsidiary of NTT, started a business-oriented high speed IP service called "XePhion High Speed IP Extra Net Service". The selling point is ensuring a higher quality service than the service of other companies.

Why is it possible to provide high quality service? The secret is using "IP Version 6" (below, referred to as "IPv6"), which has been developed as the next-generation IP.

Reference C3 (PTO-1449), SUZUKI, S., “Relaying Separated v6 Net by v4,” Nikkei Network, 2001, Vol. 16, pp. 111-114:

The term “tunneling” denotes a technology that does not send packets directly, but sends packets after wrapping them in a packet of a different protocol. In the world of IPv6, this notes a technology in which an IPv6 packet is sent after being wrapped in an IPv4 packet. The procedure in which the packets are wrapped is called encapsulation.

The reason that a technology such as tunneling is necessary is the desire to satisfy the need to connect IPv6 computers together across a network that can only communicate by using IPv4.
